Chapter 1

Introduction

Recent advances in DNA sequencing have revolutionized the field of genomics, making it possible for research groups to generate large amounts of sequenced data, very rapidly and at substantially lower cost. Its storage have been made using specific file formats, such as FASTQ and FASTA. Therefore, its analysis and manipulation is crucial [?]. Several frameworks for analysis and manipulation emerged, namely GALAXY [?], GATK [?], HTSeq [?], MEGA [?], among others. In the majority, these frameworks require licenses and do not provide a low level access to the information, since they are commonly approached by scripting or interfaces.

We describe GOOSE, a (free) novel toolkit for analyzing and manipulating FASTA-FASTQ formats and sequences (DNA, amino acids, text), with many complementary tools. The toolkit is for Linux-based systems, built for fast processing. GOOSE supports pipes for easy integration. It includes tools for information display, randomizing, edition, conversion, extraction, searching, calculation and visualization. GOOSE is prepared to deal with very large datasets, typically in the scale Gigabytes or Terabytes.

The toolkit is a command line version, using the prefix "goose-" followed by the suffix with the respective name of the program. GOOSE is implemented in C language and it is available, under GPLv3, at:

```
https://pratas.github.io/goose
```

1.1 Installation

For GOOSE installation, run:

```
git clone https://github.com/pratas/goose.git
cd goose/src/
make
```

1.2 License

The license is **GPLv3**. In resume, everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed. For details on the license, consult: http://www.gnu.org/

licenses/gpl-3.0.html.

Chapter 2

FASTQ tools

Current available tools for FASTQ format analysis and manipulation include:

- 1. goose-fastq2fasta: it converts a FASTQ file format to a pseudo FASTA file.
- 2. goose-fastq2mfasta: it converts a FASTQ file format to a pseudo Multi-FASTA file.
- 3. goose-fastqclustreads
- 4. goose-FastqExcludeN: it discards the FASTQ reads with the minimum number of "N" symbols.
- 5. goose-FastqExtractQualityScores: it extracts all the quality-scores from FASTQ reads.
- 6. goose-FastqInfo: it analyses the basic informations of FASTQ file format.
- 7. goose-FastqMaximumReadSize: it filters the FASTQ reads with the length higher than the value defined.
- 8. goose-FastqMinimumLocalQualityScoreForward
- $9. \, \, {\tt goose\text{-}FastqMinimumLocalQualityScoreReverse}$
- 10. goose-FastqMinimumQualityScore: it discards reads with average quality-score below of the defined.
- 11. goose-FastqMinimumReadSize: it filters the FASTQ reads with the length smaller than the value defined.
- 12. goose-fastqpack
- 13. goose-fastqsimulation
- 14. goose-FastqSplit
- 15. goose-FastqTrimm
- 16. goose-fastqunpack

- 17. goose-randfastqextrachars
- 18. goose-seq2fastq: it converts a genomic sequence to pseudo FASTQ file format.
- 19. goose-getunique
- 20. goose-mfmotifcoords
- 21. goose-mutatefastq: it creates a synthetic mutation of a FASTQ file given specific rates of mutations, deletions and additions.
- 22. goose-newlineonnewx
- $23.\ {\tt goose-period}$
- 24. goose-real2binthreshold
- 25. goose-reducematrixbythreshold
- 26. goose-renamehumanheaders
- 27. goose-searchphash
- 28. goose-SequenceToGroupSequence

2.1 Program goose-fastq2fasta

The goose-fastq2fasta converts a FASTQ file format to a pseudo FASTA file. However, it does not align the sequence. Also, it extracts the sequence and adds a pseudo header.

For help type:

```
./goose-fastq2fasta-h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-fastq2fasta program needs two streams for the computation, namely the input and output standard. The input stream is a FASTQ file.

```
Usage: ./goose-fastq2fasta [options] [[--] args]
or: ./goose-fastq2fasta [options]

It converts a FASTQ file format to a pseudo FASTA file.

It does NOT align the sequence.

It extracts the sequence and adds a pseudo header.

-h, --help show this help message and exit
```

Output

The output of the goose-fastq2fasta program a FASTA file.

An example, for the input, is:

```
GGGTGATGGCCGCTGCCGATGGCGTCAAATCCCACCAAGTTACCCTTAACAACTTAAGGGTTTTCAAATAGA
GTTCAGGGATACGACGTTTGTATTTTAAGAATCTGAAGCAGAAGTCGATGATAATACGCGTCGTTTTATCAT
```

2.2 Program goose-fastq2mfasta

The goose-fastq2mfasta onverts a FASTQ file format to a pseudo Multi-FASTA file. However, it does not align the sequence. Also, it extracts the sequence and adds a pseudo header.

For help type:

```
./goose-fastq2mfasta-h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-fastq2mfasta program needs two streams for the computation, namely the input and output standard. The input stream is a FASTQ file.

```
Usage: ./goose-fastq2mfasta [options] [[--] args]
or: ./goose-fastq2mfasta [options]

It converts a FASTQ file format to a pseudo Multi-FASTA file.

It does NOT align the sequence.

It extracts the sequence and adds each header in a Multi-FASTA format.
```

```
-h, --help show this help message and exit

Basic options
  < input.fastq Input FASTQ file format (stdin)
  > output.mfasta Output Multi-FASTA file format (stdout)

Example: ./goose-fastq2mfasta < input.fastq > output.mfasta
```

Output

The output of the goose-fastq2mfasta program a Multi-FASTA file.

An example, for the input, is:

```
>SRROO1666.1 071112_SLXA-EAS1_s_7:5:1:817:345 length=72

GGGTGATGGCCGCTGCCGATGGCGTCAAATCCCACCAAGTTACCCTTAACAACTTAAGGGTTTTCAAATAGA
>SRROO1666.2 071112_SLXA-EAS1_s_7:5:1:801:338 length=72

GTTCAGGGATACGACGTTTGTATTTTAAGAATCTGAAGCAGAAGTCGATGATAATACGCGTCGTTTTATCAT
```

2.3 Program goose-FastqExcludeN

The goose-FastqExcludeN discards the FASTQ reads with the minimum number of "N" symbols. Also, if present, it will erase the second header (after +).

For help type:

```
./goose-FastqExcludeN-h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-FastqExcludeN program needs two streams for the computation, namely the input and output standard. The input stream is a FASTQ file.

```
Usage: ./goose-FastqExcludeN [options] [[--] args]
   or: ./goose-FastqExcludeN [options]
It discards the FASTQ reads with the minimum number of ''N'' symbols. If present,
it will erase the second header (after +).
    -h, --help
                          show this help message and exit
Basic options
   -m, --max = < int >
                        The maximum of of "N" symbols in the read
   < input.fastq
                          Input FASTQ file format (stdin)
   > output
                          Output read information (stdout)
Example: ./goose-FastqExcludeN < input.fastq > output
Output example :
<FASTQ non-filtered reads>
Total reads : value
Filtered reads : value
```

Output

The output of the goose-FastqExcludeN program is a set of all the filtered FASTQ reads, followed by the execution report.

Using the max value as 5, an example for this input, is:

2.4 Program goose-FastqExtractQualityScores

The goose-FastqExtractQualityScores extracts all the quality-scores from FASTQ reads. For help type:

```
./goose-FastqExtractQualityScores -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-FastqExtractQualityScores program needs two streams for the computation, namely the input and output standard. The input stream is a FASTQ file.

The attribution is given according to:

```
Usage: ./goose-FastqExtractQualityScores [options] [[--] args]
   or: ./goose-FastqExtractQualityScores [options]
It extracts all the quality-scores from FASTQ reads.
    -h, --help
                        show this help message and exit
Basic options
   < input.fastq</pre>
                         Input FASTQ file format (stdin)
                          Output read information (stdout)
    > output
Example: ./goose-FastqExtractQualityScores < input.fastq > output
Output example :
<FASTQ quality scores>
             : value
Total reads
Total Quality-Scores : value
```

An example on such an input file is:

Output

The output of the goose-FastqExtractQualityScores program is a set of all the quality scores from the FASTQ reads, followed by the execution report.

An example, for the input, is:

```
Total reads : 2
Total Quality-Scores : 144
```

2.5 Program goose-FastqInfo

The goose-FastqInfo analyses the basic informations of FASTQ file format.

For help type:

```
./goose-FastqInfo-h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-FastqInfo program needs two streams for the computation, namely the input and output standard. The input stream is a FASTQ file.

The attribution is given according to:

```
Usage: ./goose-FastqInfo [options] [[--] args]
   or: ./goose-FastqInfo [options]
It analyses the basic informations of FASTQ file format.
    -h, --help
                         show this help message and exit
Basic options
   < input.fastq</pre>
                         Input FASTQ file format (stdin)
   > output
                          Output read information (stdout)
Example: ./goose-FastqInfo < input.fastq > output
Output example :
Total reads
             : value
Max read length : value
Min read length : value
Min QS value : value
Max QS value : value
QS range
               : value
```

An example on such an input file is:

Output

The output of the goose-FastqInfo program is a set of informations related with the file readed. An example, for the input, is:

```
Total reads : 2

Max read length : 72

Min read length : 72

Min QS value : 41

Max QS value : 73

QS range : 33
```

2.6 Program goose-FastqMaximumReadSize

The goose-FastqMaximumReadSize filters the FASTQ reads with the length higher than the value defined. For help type:

```
./goose-FastqMaximumReadSize -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-FastqMaximumReadSize program needs two streams for the computation, namely the input and output standard. The input stream is a FASTQ file.

The attribution is given according to:

```
Usage: ./goose-FastqMaximumReadSize [options] [[--] args]
   or: ./goose-FastqMaximumReadSize [options]
It filters the FASTQ reads with the length higher than the value defined.
If present, it will erase the second header (after +).
    -h, --help
                          show this help message and exit
Basic options
   -s, --size=<int>
< input.fastq
                        The maximum read length
                          Input FASTQ file format (stdin)
   > output
                          Output read information (stdout)
Example: ./goose-FastqMaximumReadSize < input.fastq > output
Output example :
<FASTQ non-filtered reads>
Total reads : value
Filtered reads : value
```

An example on such an input file is:

Output

The output of the goose-FastqMaximumReadSize program is a set of all the filtered FASTQ reads, followed by the execution report.

Using the size value as 60, an example for this input, is:

2.7 Program goose-FastqMinimumQualityScore

The goose-FastqMinimumQualityScore discards reads with average quality-score below of the defined. For help type:

```
./goose-FastqMinimumQualityScore -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-FastqMinimumQualityScore program needs two streams for the computation, namely the input and output standard. The input stream is a FASTQ file.

```
Usage: ./goose-FastqMinimumQualityScore [options] [[--] args]
  or: ./goose-FastqMinimumQualityScore [options]

It discards reads with average quality-score below value.
  -h, --help show this help message and exit

Basic options
  -m, --min=<int> The minimum average quality-score (Value 25 or 30 is commonly used)
  < input.fastq Input FASTQ file format (stdin)</pre>
```

```
> output Output read information (stdout)

Example: ./goose-FastqMinimumQualityScore < input.fastq > output

Output example:

<FASTQ non-filtered reads>

Total reads : value

Filtered reads : value
```

Output

The output of the goose-FastqMinimumQualityScore program is a set of all the filtered FASTQ reads, followed by the execution report.

Using the minimum average value as 30, an example for this input, is:

2.8 Program goose-FastqMinimumReadSize

The goose-FastqMinimumReadSize filters the FASTQ reads with the length smaller than the value defined. For help type:

```
./goose-FastqMinimumReadSize -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-FastqMinimumReadSize program needs two streams for the computation, namely the input and output standard. The input stream is a FASTQ file.

```
Usage: ./goose-FastqMinimumReadSize [options] [[--] args]
   or: ./goose-FastqMinimumReadSize [options]
It filters the FASTQ reads with the length smaller than the value defined.
If present, it will erase the second header (after +).
    -h, --help
                          show this help message and exit
Basic options
   -s, --size=<int>
                        The minimum read length
    < input.fastq
                         Input FASTQ file format (stdin)
   > output
                          Output read information (stdout)
Example: ./goose-FastqMinimumReadSize < input.fastq > output
Output example :
<FASTQ non-filtered reads>
Total reads : value
Filtered reads : value
```

Output

The output of the goose-FastqMinimumReadSize program is a set of all the filtered FASTQ reads, followed by the execution report.

Using the size value as 65, an example for this input, is:

2.9 Program goose-mutatefastq

The goose-mutatefastq creates a synthetic mutation of a FASTQ file given specific rates of mutations, deletions and additions. All these parameters are defined by the user, and their are optional. For help type:

```
./goose-mutatefastq -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-mutatefastq program needs two streams for the computation, namely the input and output standard. However, optional settings can be supplied too, such as the starting point to the random generator, and the edition, deletion and insertion rates. Also, the user can choose to use the ACGTN alphabet in the synthetic mutation. The input stream is a FASTQ File.

The attribution is given according to:

```
Usage: ./goose-mutatefastq [options] [[--] args]
   or: ./goose-mutatefastq [options]
Creates a synthetic mutation of a FASTQ file given specific rates of mutations,
deletions and additions
    -h, --help
                                  show this help message and exit
Basic options
    < input.fasta
                                  Input FASTQ file format (stdin)
    > output.fasta
                                  Output FASTQ file format (stdout)
Optional
    -s, --seed = <int>
                                  Starting point to the random generator
    -m, --mutation-rate=<dbl>
                                Defines the mutation rate (default 0.0)
    -d, --deletion-rate=<dbl>
                                Defines the deletion rate (default 0.0)
    -i, --insertion-rate=<dbl> Defines the insertion rate (default 0.0)
    -a, --ACGTN-alphabet
                                  When active, the application uses the ACGTN alphabet
Example: ./goose-mutatefastq -s <seed> -m <mutation rate> -d <deletion rate> -i
<insertion rate> -a < input.fastq > output.fastq
```

An example on such an input file is:

Output

The output of the goose-mutatefastq program is a FASTQ file whith the synthetic mutation of input file. Using the seed value as 1 and the mutation rate as 0.5, an example for this input, is:

2.10 Program goose-seq2fastq

The goose-seq2fastq converts a genomic sequence to pseudo FASTQ file format.

For help type:

```
./goose-seq2fastq -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-seq2fastq program needs two streams for the computation, namely the input and output standard. The input stream is a sequence group file.

The attribution is given according to:

An example on such an input file is:

ACAAGACGCCTCCTGCTGCTGCTGCTCCCCGGGGCCACGGCCCTGGAGGGTCCACCGCTGCCCTGCTGCCATTGTCCCC
GGCCCCACCTAAGGAAAAGCAGCCTCCTGACTTTCCTCGCTTGGGCCGAGACAGCGAGCATATGCAGGAAGCGGCAGGAA

TAAAAACCTCACCCATGAATGCTCACGCAAGTTTAATTACAGACCTGAAACAAGATGCCATTGTCCCCCGGCCTCCTGCTG

Output

The output of the goose-seq2fastq program is a pseudo FASTQ file.

An example, using the size line as 80 and the read's header as "Seq2Fastq", for the input, is:

9Seq2Fastq1	
A CAAGA CGGCCTCCTGCTGCTGCTGCTCTCCGGGGCCACGGCCCTGGAGGGTCCACCGCTGCCCTGCTGCCATTGTCCCC

Chapter 3

FASTA tools

Current available FASTA tools, for analysis and manipulation, are:

- 1. goose-fasta2seq: it converts a FASTA or Multi-FASTA file format to a seq.
- 2. goose-fastaextract: it extracts sequences from a FASTA file, which the range is defined by the user in the parameters.
- 3. goose-fastaextractbyread: it extracts sequences from each read in a Multi-FASTA file (splited by \n), which the range is defined by the user in the parameters.
- 4. goose-fastainfo: it shows the readed information of a FASTA or Multi-FASTA file format.
- 5. goose-mutatefasta: it reates a synthetic mutation of a fasta file given specific rates of editions, deletions and additions.
- 6. goose-randfastaextrachars: it substitues in the DNA sequence the outside ACGT chars by random ACGT symbols.
- 7. goose-extractreadbypattern: it extracts reads from a Multi-FASTA file format given a pattern in the header.
- 8. goose-findnpos: it reports the "N" regions in a sequence or FASTA (seq) file.
- 9. goose-seq2fasta: it converts a genomic sequence to pseudo FASTA file format.
- 10. goose-permuteseqbyblocks
- 11. goose-splitreads: it splits a Multi-FASTA file to multiple FASTA files.

3.1 Program goose-fasta2seq

The goose-fasta2seq converts a FASTA or Multi-FASTA file format to a sequence. For help type:

```
./goose-fasta2seq -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-fasta2seq program needs two streams for the computation, namely the input and output standard. The input stream is a FASTA or Multi-FASTA file.

The attribution is given according to:

An example on such an input file is:

```
> ABOOO264 | acc = ABOOO264 | descr = Homo sapiens mRNA

ACAAGACGGCCTCCTGCTGCTGCTCCCCGGGGCCACGGCCCTGGAGGGTCCACCGCTGCCCTGCCATTGTCCCC

GGCCCCACCTAAGGAAAAGCAGCCTCCTGACTTTCCTCGCTTGGGCCGAGACAGCGAGCATATGCAGGAAGCGGCAGGAA

GCGAATCCGGCGCCCGGGACAGAATCTCCTGCAAAGCCCTGCAGGAACCTTCTTCTGGAAGACCTTCTCCACCCCCCCAGC

TAAAACCTCACCCATGAATGCTCACGCAAGTTTAATTACAGACCTGAA

> ABOOO263 | acc = ABOOO263 | descr = Homo sapiens mRNA

ACAAGATGCCATTGTCCCCCGGGCCTCCTGCTGCTGCTGCTCTCCGGGGCCACCGCTGCCCTGCCCTTGCCCTTGGGGGT

GGCCCCACCGGCCGAGACAGCCATATGCAGGAAGCGGCAGGAATAAGGAAAAGCAGCCTCCTGACTTTCCTCGCTTG

GTGGTTTGAGTGGACCTCCCAGGCCAGTGCCGGGCCCCTCATAGGAGAGACCTCCTGGAAGACCTTCTCCTCCTCCTGCAAA

TAAAACCTCACCCATGAATCCGCGCGCCGGGACAGGAATGCCCTGCAG
```

Output

The output of the goose-fasta2seq program is a group sequence.

An example, for the input, is:

3.2 Program goose-fastaextract

The goose-fastaextract extracts sequences from a FASTA file, which the range is defined by the user in the parameters.

For help type:

```
./goose-fastaextract -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-fastaextract program needs two parameters, which defines the begin and the end of the extraction, and two streams for the computation, namely the input and output standard. The input stream is a FASTA file.

The attribution is given according to:

```
Usage: ./goose-fastaextract [options] [[--] args]
or: ./goose-fastaextract [options]

It extracts sequences from a FASTA file.

-h, --help show this help message and exit

Basic options
-i, --init=<int> The first position to start the extraction (default 0)
-e, --end=<int> The last extract position (default 100)
< input.fasta Input FASTA or Multi-FASTA file format (stdin)
> output.seq Output sequence file (stdout)

Example: ./goose-fastaextract -i <init> -e <end> < input.fasta > output.seq
```

An example on such an input file is:

Output

The output of the goose-fastaextract program is a group sequence.

An example, using the value 0 as extraction starting point and the 50 as the end, for the provided input,

3.3 Program goose-fastaextractbyread

The goose-fastaextractbyread extracts sequences from a FASTA or Multi-FASTA file, which the range is defined by the user in the parameters.

For help type:

```
./goose-fastaextractbyread-h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-fastaextractbyread program needs two parameters, which defines the begin and the end of the extraction, and two streams for the computation, namely the input and output standard. The input stream is a FASTA or Multi-FASTA file.

The attribution is given according to:

```
Usage: ./goose-fastaextractbyread [options] [[--] args]
or: ./goose-fastaextractbyread [options]

It extracts sequences from each read in a Multi-FASTA file (splited by \n)

-h, --help show this help message and exit

Basic options
-i, --init=<int> The first position to start the extraction (default 0)
-e, --end=<int> The last extract position (default 100)
< input.fasta Input FASTA or Multi-FASTA file format (stdin)
> output.fasta Output FASTA or Multi-FASTA file format (stdout)

Example: ./goose-fastaextractbyread -i <init> -e <end> < input.fasta > output.fasta
```

An example on such an input file is:

Output

The output of the goose-fastaextractbyread program is FASTA or Multi-FASTA file wiht the extracted sequences.

An example, using the value 0 as extraction starting point and the 50 as the end, for the provided input, is:

```
>AB000264 |acc=AB000264|descr=Homo sapiens mRNA
ACAAGACGGCCTCCTGCTGCTGCTCCCGGGGCCACGGCCCTGGAGG
>AB000263 |acc=AB000263|descr=Homo sapiens mRNA
ACAAGATGCCATTGTCCCCCGGCCTCCTGCTGCTGCTCCCGGGGCC
```

3.4 Program goose-fastainfo

The goose-fastainfo shows the readed information of a FASTA or Multi-FASTA file format. For help type:

```
./goose-fastainfo-h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-fastainfo program needs two streams for the computation, namely the input and output standard. The input stream is a FASTA or Multi-FASTA file.

```
Usage: ./goose-fastainfo [options] [[--] args]
   or: ./goose-fastainfo [options]
It shows read information of a FASTA or Multi-FASTA file format.
    -h, --help
                          show this help message and exit
Basic options
   < input.fasta</pre>
                          Input FASTA or Multi-FASTA file format (stdin)
   > output
                          Output read information (stdout)
Example: ./goose-fastainfo < input.fasta > output
Output example :
Number of reads
                    : value
Number of bases
                    : value
MIN of bases in read : value
```

```
MAX of bases in read : value
AVG of bases in read : value
```

Output

The output of the goose-fastainfo program is a set of informations related with the file readed. An example, for the input, is:

```
Number of reads : 2
Number of bases : 736
MIN of bases in read : 368
MAX of bases in read : 368
AVG of bases in read : 368.0000
```

3.5 Program goose-mutatefasta

The goose-mutatefasta creates a synthetic mutation of a FASTA file given specific rates of editions, deletions and additions. All these parameters are defined by the user, and their are optional.

For help type:

```
./goose-mutatefasta-h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-mutatefasta program needs two streams for the computation, namely the input and output standard. However, optional settings can be supplied too, such as the starting point to the random generator, and the edition, deletion and insertion rates. Also, the user can choose to use the ACGTN alphabet in the synthetic mutation. The input stream is a FASTA or Multi-FASTA File.

```
Usage: ./goose-mutatefasta [options] [[--] args]
   or: ./goose-mutatefasta [options]
Creates a synthetic mutation of a fasta file given specific rates of editions,
deletions and additions
    -h, --help
                                  show this help message and exit
Basic options
   < input.fasta</pre>
                                 Input FASTA or Multi-FASTA file format (stdin)
    > output.fasta
                                  Output FASTA or Multi-FASTA file format (stdout)
Optional
    -s, --seed=<int>
                                  Starting point to the random generator
   -e, --edit-rate=<dbl>
                                Defines the edition rate (default 0.0)
    -d, --deletion-rate=<dbl>
                                Defines the deletion rate (default 0.0)
    -i, --insertion-rate=<dbl> Defines the insertion rate (default 0.0)
    -a, --ACGTN-alphabet
                                 When active, the application uses the ACGTN alphabet
Example: ./goose-mutatefasta -s <seed> -e <edit rate> -d <deletion rate> -i
<insertion rate> -a < input.fasta > output.fasta
```

Output

The output of the goose-mutatefasta program is a FASTA or Multi-FASTA file whith the synthetic mutation of input file.

Using the seed value as 1 and the edition rate as 0.5, an example for this input, is:

```
> ABOOO 264 | acc = ABOOO 264 | descr = Homo sapiens mRNA
ACGCAACGNATTCCTGCTGATCATANTGTNCCGCNCCCCNGCGACGGGGNCTCNCNNGCACACATNGTACCATTGTCCAC
NCTTNCANGTNANCGCTAGCAGGCTACNGTTTNTCCTCNCCTANNCCAANCNGGCGTNNNTACACTGGCACGTGCAGGCA
TNGGTCGGCNGGNNCCTCCGGNAACGGCACCGGAGACGTCGGNGGNTATACAGGTGTCANGAAACATCCCCGCGNC
GNGTGNCCNNGAANCCANAGAGTATCTCACTCACAACCCTGCGTGCACNTCTAGAGNANGACCTTACNCACCNTCCCNTT
NNGTACCACACCAATGAACGCTGCAGAAAGTCTGTTTNNAGGNGNGCA
> ABOOO 263 | acc = ABOOO 263 | descr = Homo sapiens mRNA
ATTTGAAGGCAANCGGNCCAGNAATNCGGNGGGTGCNGCTCNTGTNGGCTACGGNCATCGCGGCCCTGCTNTANTAAGCN
```

3.6 Program goose-randfastaextrachars

The goose-randfastaextrachars substitues in the DNA sequence the outside ACGT chars by random ACGT symbols. It works both in FASTA and Multi-FASTA file formats.

For help type:

```
./goose-randfastaextrachars -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-randfastaextrachars program needs two streams for the computation, namely the input and output standard. The input stream is a FASTA or Multi-FASTA file.

The attribution is given according to:

```
Usage: ./goose-randfastaextrachars [options] [[--] args]
or: ./goose-randfastaextrachars [options]

It substitues in the DNA sequence the outside ACGT chars by random ACGT symbols.

It works both in FASTA and Multi-FASTA file formats

-h, --help show this help message and exit

Basic options
<input.fasta Input FASTA or Multi-FASTA file format (stdin)
> output.fasta Output FASTA or Multi-FASTA file format (stdout)

Example: ./goose-randfastaextrachars < input.fasta > output.fasta
```

An example on such an input file is:

Output

The output of the goose-randfastaextrachars program is a FASTA or Multi-FASTA file.

An example, for the input, is:

3.7 Program goose-extractreadbypattern

The goose-extractreadbypattern extracts reads from a Multi-FASTA file format given a pattern in the header. Also, this pattern is case insensitive.

For help type:

```
./goose-extractreadbypattern -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-extractreadbypattern program needs two streams for the computation, namely the input and output standard. The input stream is a Multi-FASTA file.

```
Example: ./goose-extractreadbypattern-p <pattern> < input.fasta > output.fasta
```

Output

The output of the goose-extractreadbypattern program is a Multi-FASTA file.

An example, using the pattern "264", for the provided input, is:

3.8 Program goose-findnpos

The goose-findness reports the "N" regions in a sequence or FASTA (seq) file.

For help type:

```
./goose-findnpos -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-findness program needs two streams for the computation, namely the input and output standard. The input stream is a FASTA file or a sequence.

```
Usage: ./goose-findnpos [options] [[--] args]
  or: ./goose-findnpos [options]

It reports the 'N' regions in a sequence or FASTA (seq) file.
```

```
>ABOOO264 | acc=ABOOO264 | descr=Homo sapiens mRNA
NCNNNACGGCCTCCTGCTGCTGCTCCTCCGGGGCCACGGCCCTGGAGGGTCCACCGCTGCCCTGCTGCCATTGTCCCC
GNCCCCACCTAAGGAAAAGCAGCCTCCTGACTTTCCTCGCTTGGGCCGAGACAGCGAGCATATGCAGGAAGCGGCAGGAA
GTNGTTTGAGTGGACCTCCGGGCCCCTCATAGGAGAGGAAGCTCGGGAGGTGGCCAGGCGGCAGGAAGCAGGCCAGTGCC
GCGAATCCGCGCGCGCGGGACAGATCTCCTGCAAAGCCCTGCAGGAACNTCTTCTGGAAGACCTTCTCCACCCCCCCAGC
TAAAACCTCACCCATGAATGCTCACGCAAGTTTAATTACAGACCTGAN
```

Output

The output of the goose-findness program is a structured report of "N" appearances in the sequence or FASTA file. The first column is the first position of the "N" appearance, the second is the position of the last "N" in the interval found, and the last column is the count of "N" in this interval.

An example, for the input, is:

```
1 1 1 1 3 5 3 82 82 1 163 163 1 289 289 1
```

3.9 Program goose-seq2fasta

The goose-seq2fasta converts a genomic sequence to pseudo FASTA file format.

For help type:

```
./goose-seq2fasta -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-seq2fasta program needs two streams for the computation, namely the input and output standard. The input stream is a sequence group file.

Output

The output of the goose-seq2fasta program is a pseudo FASTA file.

An example, using the size line as 80 and the read's header as "Seq2Fasta", for the input, is:

3.10 Program goose-splitreads

The goose-splitreads splits a Multi-FASTA file to multiple FASTA files.

For help type:

```
./goose-splitreads -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-splitreads program needs one stream for the computation, namely the input standard. This input stream is a Multi-FASTA file.

The attribution is given according to:

An example on such an input file is:

```
> ABOOO264 | acc = ABOOO264 | descr = Homo sapiens mRNA

ACAAGACGGCCTCCTGCTGCTGCTCTCCCGGGGCCCACGGCCCTGGAGGGTCCACCGCTGCCCTGCTGCCATTGTCCCC

GGCCCCACCTAAGGAAAAGCAGCCTCCTGACTTTCCTCGCTTGGGCCGAGACAGCGAGCATATGCAGGAAGCGGCAGGAA

GTGGTTTGAGTGGACCTCCGGGCCCCTCATAGGAGAGAGCTCGGGAGGTGGCCAGGCCAGGAAGCAGGCCAGTGCC

GCGAATCCGCGCGCCGGGACAGAATCTCCTGCAAAGCCCTGCAGGAACTTCTTCTGGAAGACCTTCTCCACCCCCCCAGC

TAAAACCTCACCCATGAATGCTCACGCAAGTTTAATTACAGACCTGAA

> ABOOO263 | acc = ABOOO263 | descr = Homo sapiens mRNA

ACAAGATGCCATTGTCCCCCGGGCTCCTGCTGCTGCTGCTCTCCGGGGGCCACGGCCACCGCTGCCCTGCCCCTGGAGGGT

GGCCCCACCGGCCGAGACAGCCATTTCCAGGAAGCCGCAGGAAAAAGCAGCCTCCTGACTTTCCTCGCTTG

GTGGTTTGAGTGGACCTCCCAGGCCAGTGCCGGGCCCCTCATAGGAGAGCTCCGGGAGGTGGCCAGGCGCAGGAAG

GCGCACCCCCCCAGCAATCCGCGCGCCCGGGACAGAATGCCCTGCAGGAACTTCTTCTGGAAGACCTTCTCCTCCTGCAAA

TAAAACCTCACCCATGAATGCTCACGCAAGTTTAATTACAGACCTGAA
```

Output

The output of the goose-splitreads program is a report summary of the execution, and the files created in the defined location.

An example, for the input, is:

1 : Splitting to file:./out1.fasta
2 : Splitting to file:./out2.fasta

Chapter 4

Genomic sequence tools

Current available genomic sequence tools, for analysis and manipulation, are:

- 1. goose-genrandomdna: it generates a synthetic DNA.
- 2. goose-mutatedna
- 3. goose-randseqextrachars
- 4. goose-geco
- 5. goose-gede

4.1 Program goose-genrandomdna

The goose-genrandomdna generates a synthetic DNA.

For help type:

```
./goose-genrandomdna -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-genrandomdna program needs one stream for the computation, namely the output standard. The attribution is given according to:

```
Usage: ./goose-genrandomdna [options] [[--] args]
or: ./goose-genrandomdna [options]

It generates a synthetic DNA.

-h, --help show this help message and exit

Basic options
> output.seq Output synthetic DNA sequence (stdout)
```

```
-s, --seed=<int> Starting point to the random generator (Default 0)
-n, --nSymbols=<int> Number of symbols generated (Default 100)
-f, --frequency=<str> The frequency of each base. It should be represented in the following format: <fa,fc,fg,ft>.

Example: ./goose-genrandomdna > output.seq
```

Output

The output of the goose-genrandomdna program is a sequence group file whith the synthetic DNA. Using the seed value as 1 and the number of symbols as 400, an example of an execution, is:

Chapter 5

Amino acid sequence tools

Current available amino acid sequence tools, for analysis and manipulation, are:

- 1. goose-AminoAcidToGroup: it converts an amino acid sequence to a group sequence.
- 2. goose-ProteinToPseudoDNA: it converts an amino acid (protein) sequence to a pseudo DNA sequence.

5.1 Program goose-AminoAcidToGroup

The goose-AminoAcidToGroup converts an amino acid sequence to a group sequence. For help type:

```
./goose-AminoAcidToGroup-h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-AminoAcidToGroup program needs two streams for the computation, namely the input and output standard. The input stream is an amino acid sequence. The attribution is given according to:

```
Usage: ./goose-AminoAcidToGroup [options] [[--] args]
or: ./goose-AminoAcidToGroup [options]

It converts a amino acid sequence to a group sequence.

-h, --help show this help message and exit

Basic options
<input.prot Input amino acid sequence file (stdin)
> output.group Output group sequence file (stdout)

Example: ./goose-AminoAcidToGroup < input.prot > output.group

Table:
Prot Group

R P
```

```
Amino acids with electric charged side chains: POSITIVE
Н
K
D
    N
Ε
   N Amino acids with electric charged side chains: NEGATIVE
S
Т
N
   U Amino acids with electric UNCHARGED side chains
Q
    U
С
   S
U

IESKIGKDKFIEQIAIIADAKKYVSALIVPCFDSLEEYAKQLNIKYHDRLELLKNSDILKMFE
```

Output

The output of the ${\tt goose-AminoAcidToGroup}$ program is a group sequence.

An example, for the input, is:

HSHHHPPUHHHHNPHHHUPHPUHHSSPHPHHSSSSHPHNSHHSHHPHHSHUHPHSHSHUNUUHUHUSHPNHUHUSUUHS UHHSPHNHPHSNUUNHHHPSSHHHPSHHPPSNNUHUHHUNNSHHPUSNHSNHNNUSUHHHUNPHPNHHPUUUSPHHHSUH HNUPHSPNPHHNUHHHHHNHPPHHUHHHHSSHNUHNNHHPUHUHPHPNPHNHHPUUNHHPHHN

5.2 Program goose-ProteinToPseudoDNA

The goose-ProteinToPseudoDNA converts an amino acid (protein) sequence to a pseudo DNA sequence. For help type:

```
./goose-ProteinToPseudoDNA -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-ProteinToPseudoDNA program needs two streams for the computation, namely the input and output standard. The input stream is an amino acid sequence. The attribution is given according to:

```
Usage: ./goose-ProteinToPseudoDNA [options] [[--] args]
   or: ./goose-ProteinToPseudoDNA [options]
It converts a protein sequence to a pseudo DNA sequence.
   -h, --help show this help message and exit
Basic options
   < input.prot</pre>
                    Input amino acid sequence file (stdin)
   > output.dna
                    Output DNA sequence file (stdout)
Example: ./goose-ProteinToPseudoDNA < input.prot > output.dna
Table:
Prot
       DNA
   GCA
С
   TGC
D
   GAC
Ε
   GAG
   TTT
F

6.1 Program goose-reverse

The ${\tt goose\text{-}reverse}$ reverses the order of a sequence file.

For help type:

14. goose-info

```
./goose-reverse -h
```

In the following subsections, we explain the input and output paramters.

Input parameters

The goose-reverse program needs two streams for the computation, namely the input and output standard. The input stream is a sequence file.

The attribution is given according to:

An example on such an input file is:

Output

The output of the goose-reverse program is a group sequence.

An example, for the input, is:
